Solana DePIN

// March 2025

Part I Wireless

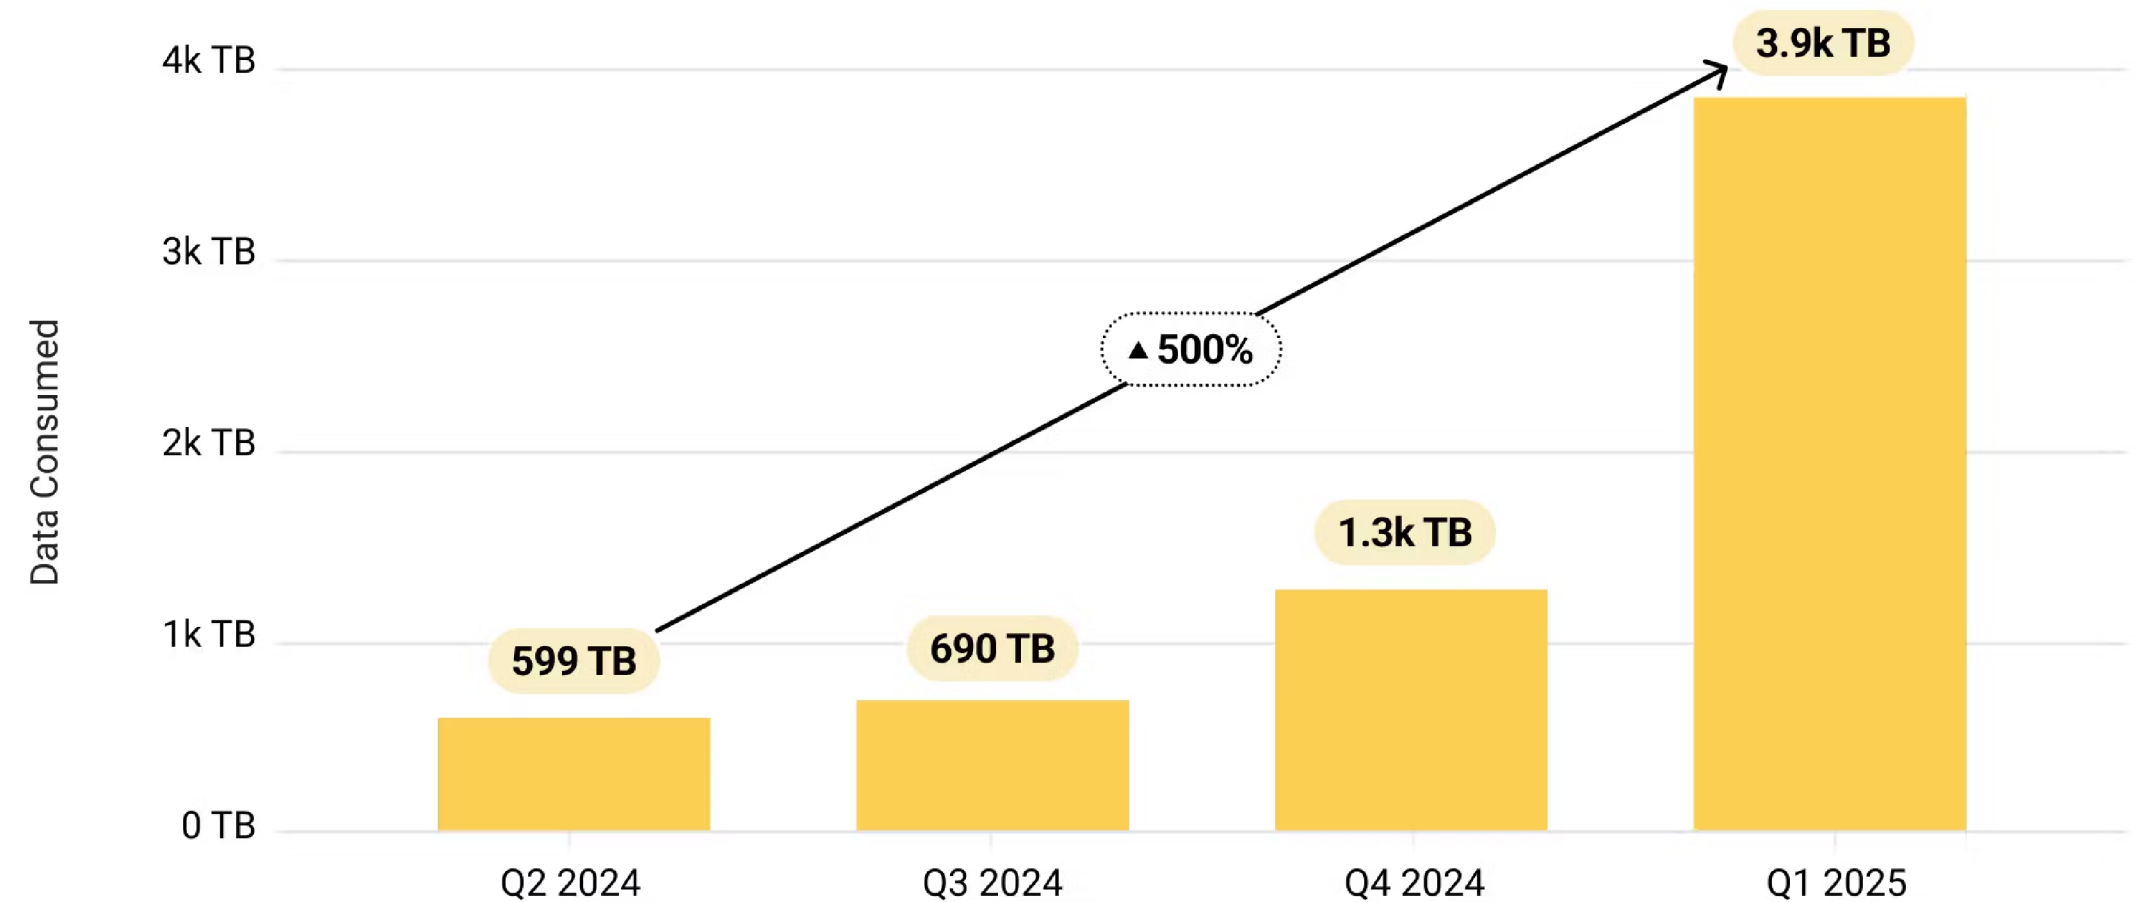

Dabba posts 500% yearly growth.

As a decentralized internet service provider, Dabba delivers internet access through a blockchain-powered network. In Q1 of this year, users consumed 3.9TB of data.

Note: Data has been sourced from Dabba's X post.

// Deep Dive: Wireless // March 2025

Dabba Data Consumed By Quarter

Note: Data has been sourced from Dabba's X post.

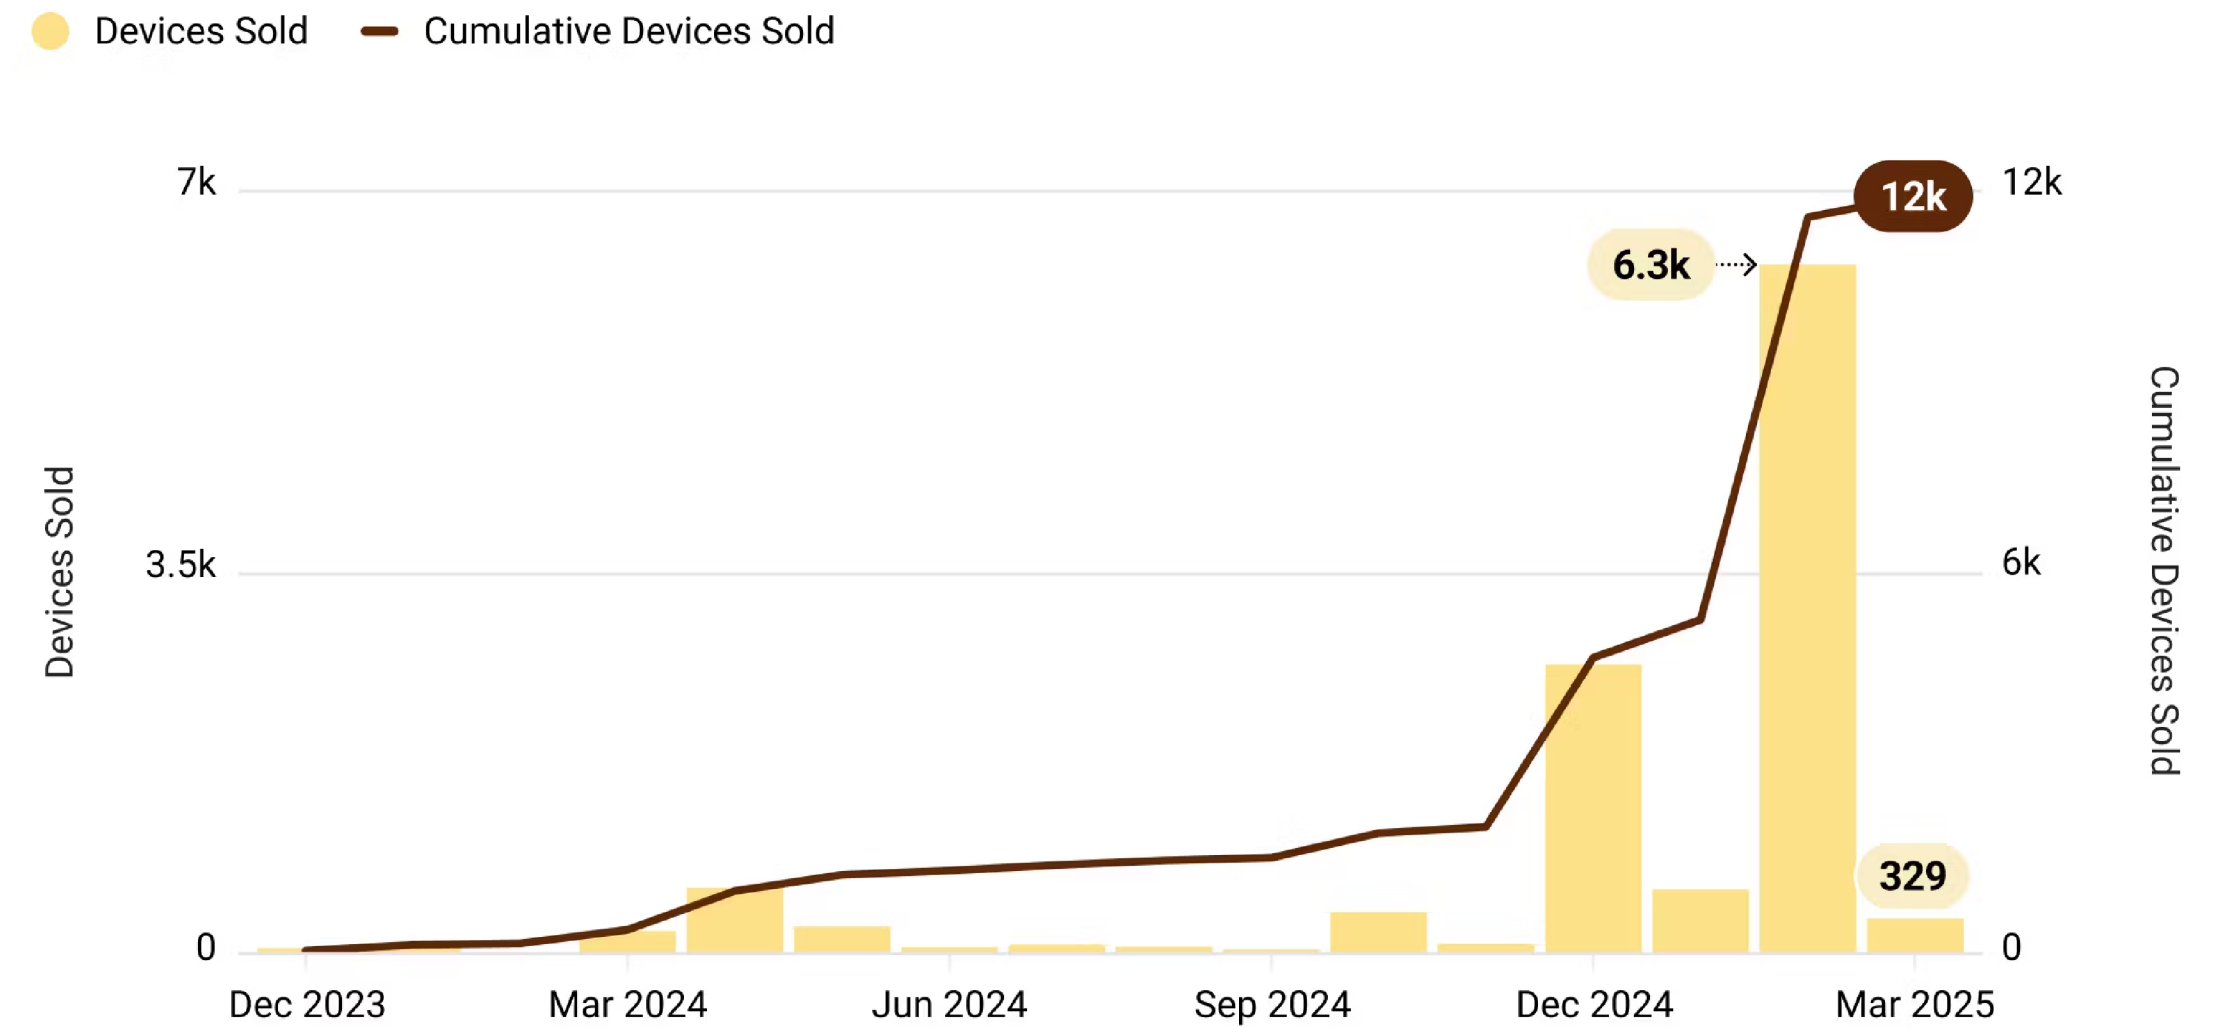

Dabba's network expands as hotspot sales approach 12k.

With about 12k Dabba Lite hotspots sold, including over 300 in March, Dabba's decentralized infrastructure continues to expand.

Note: Data has been sourced from Dabba's website.

Dabba Network Devices Sold By Month

Note: Data has been sourced from Dabba's website.

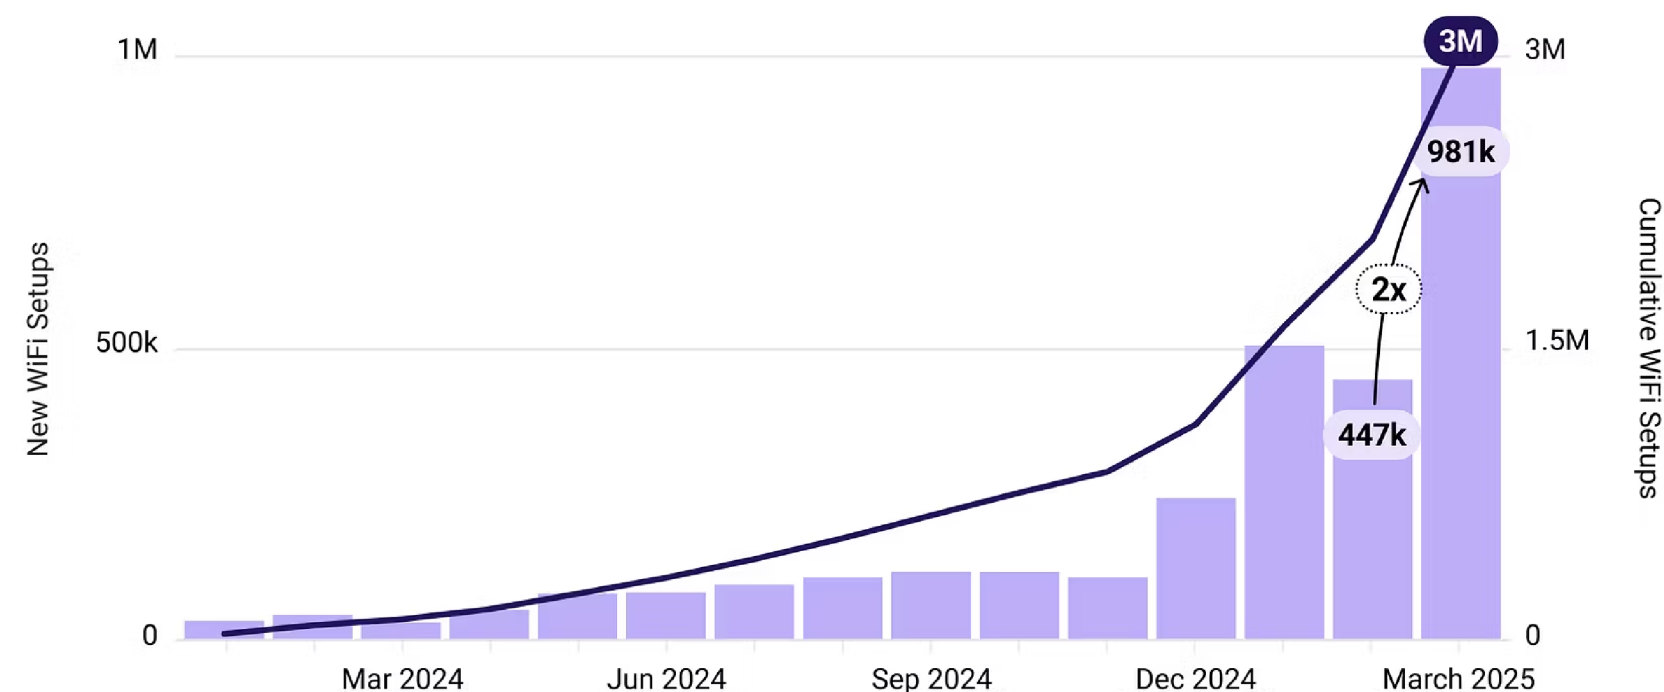

The Roam ecosystem flourished in March.

The network reached 3 million hotspots and 2.5 million registered users, highlighting rapid adoption.

Roam WiFi Setups

Roam Registered Users

By Month

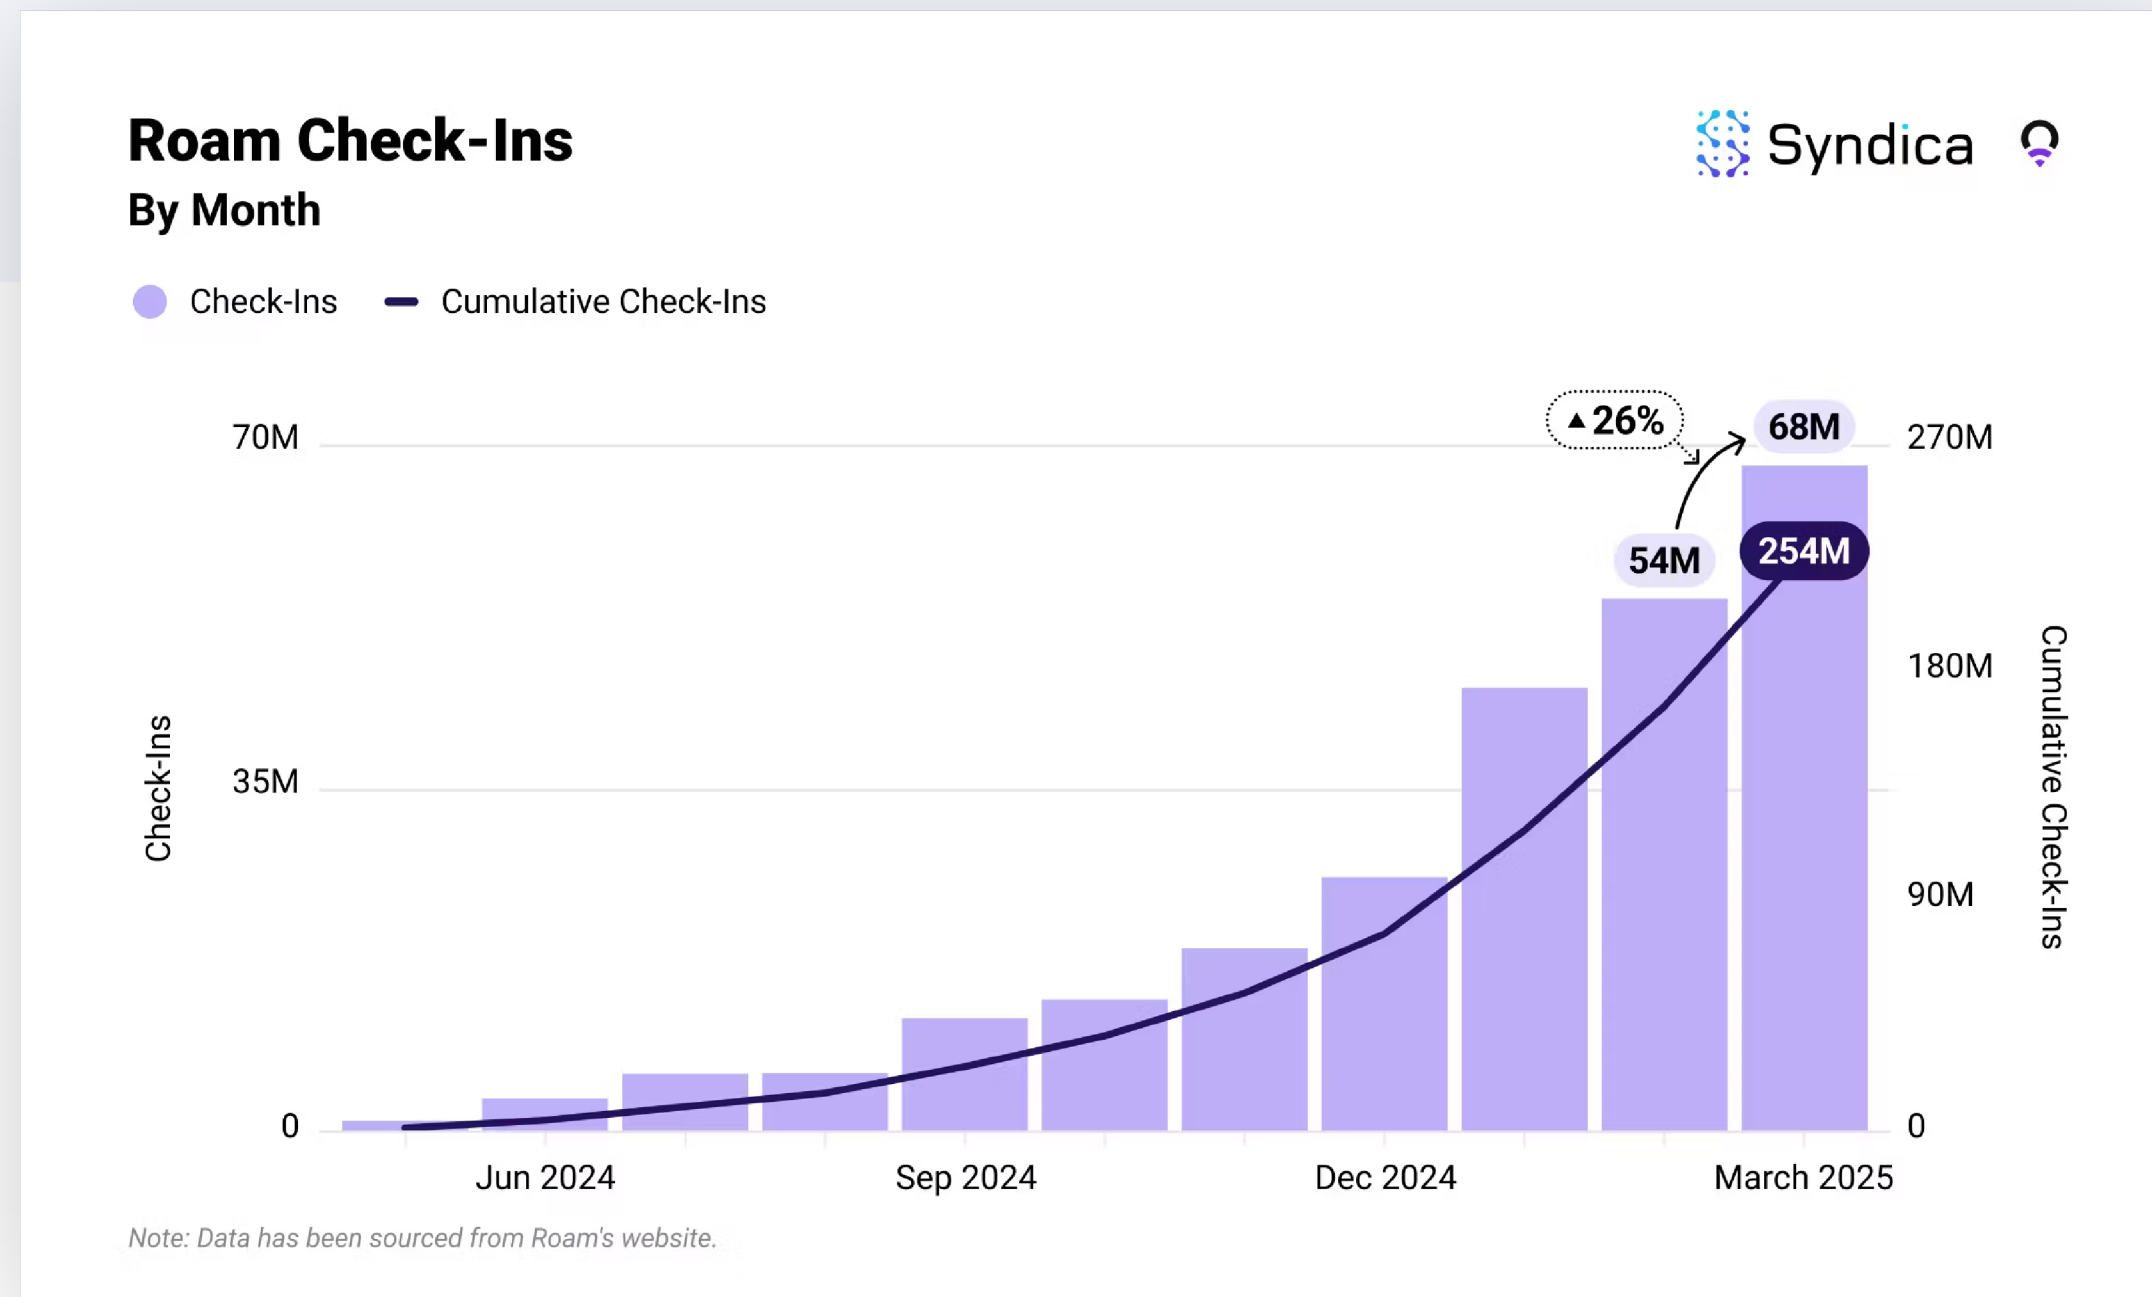

● New Registered Users ● Cumulative Registered Users

Note: Data has been sourced from Roam's website.

Roam check-ins have been steadily climbing month-over-month.

Check-ins enable the protocol to validate WiFi connectivity with the help of its users. In March, Roam recorded 254M check-ins, a 26% increase from the previous month.

XNET data offload has hit a new peak.

Average daily data offload jumped 8% in March.

XNET unveiled a new WiFi roaming agreement with AT&T that grants AT&T customers access to XNET's carrier-grade Wi-Fi network.

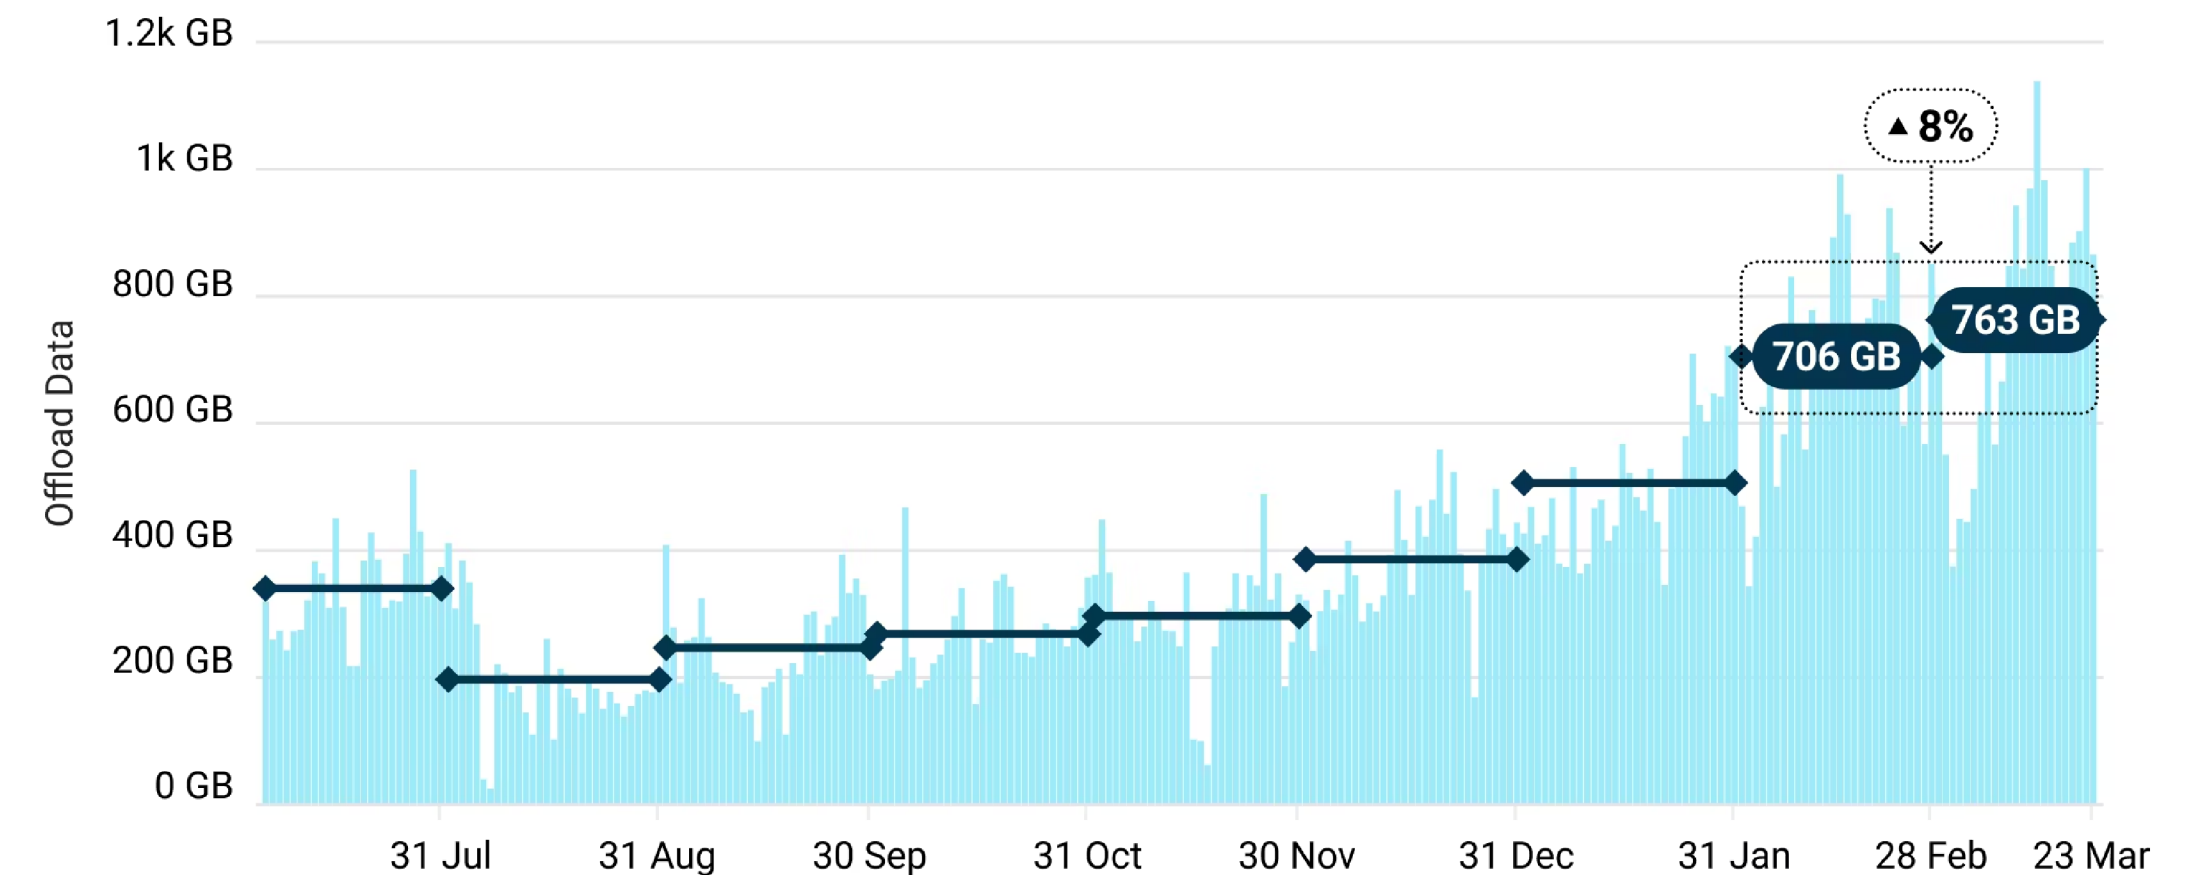

Note: This data has been obtained from XNET's Dune dataset and only covers until March 23, 2025.

XNET contributors and rewards hit a new ATH.

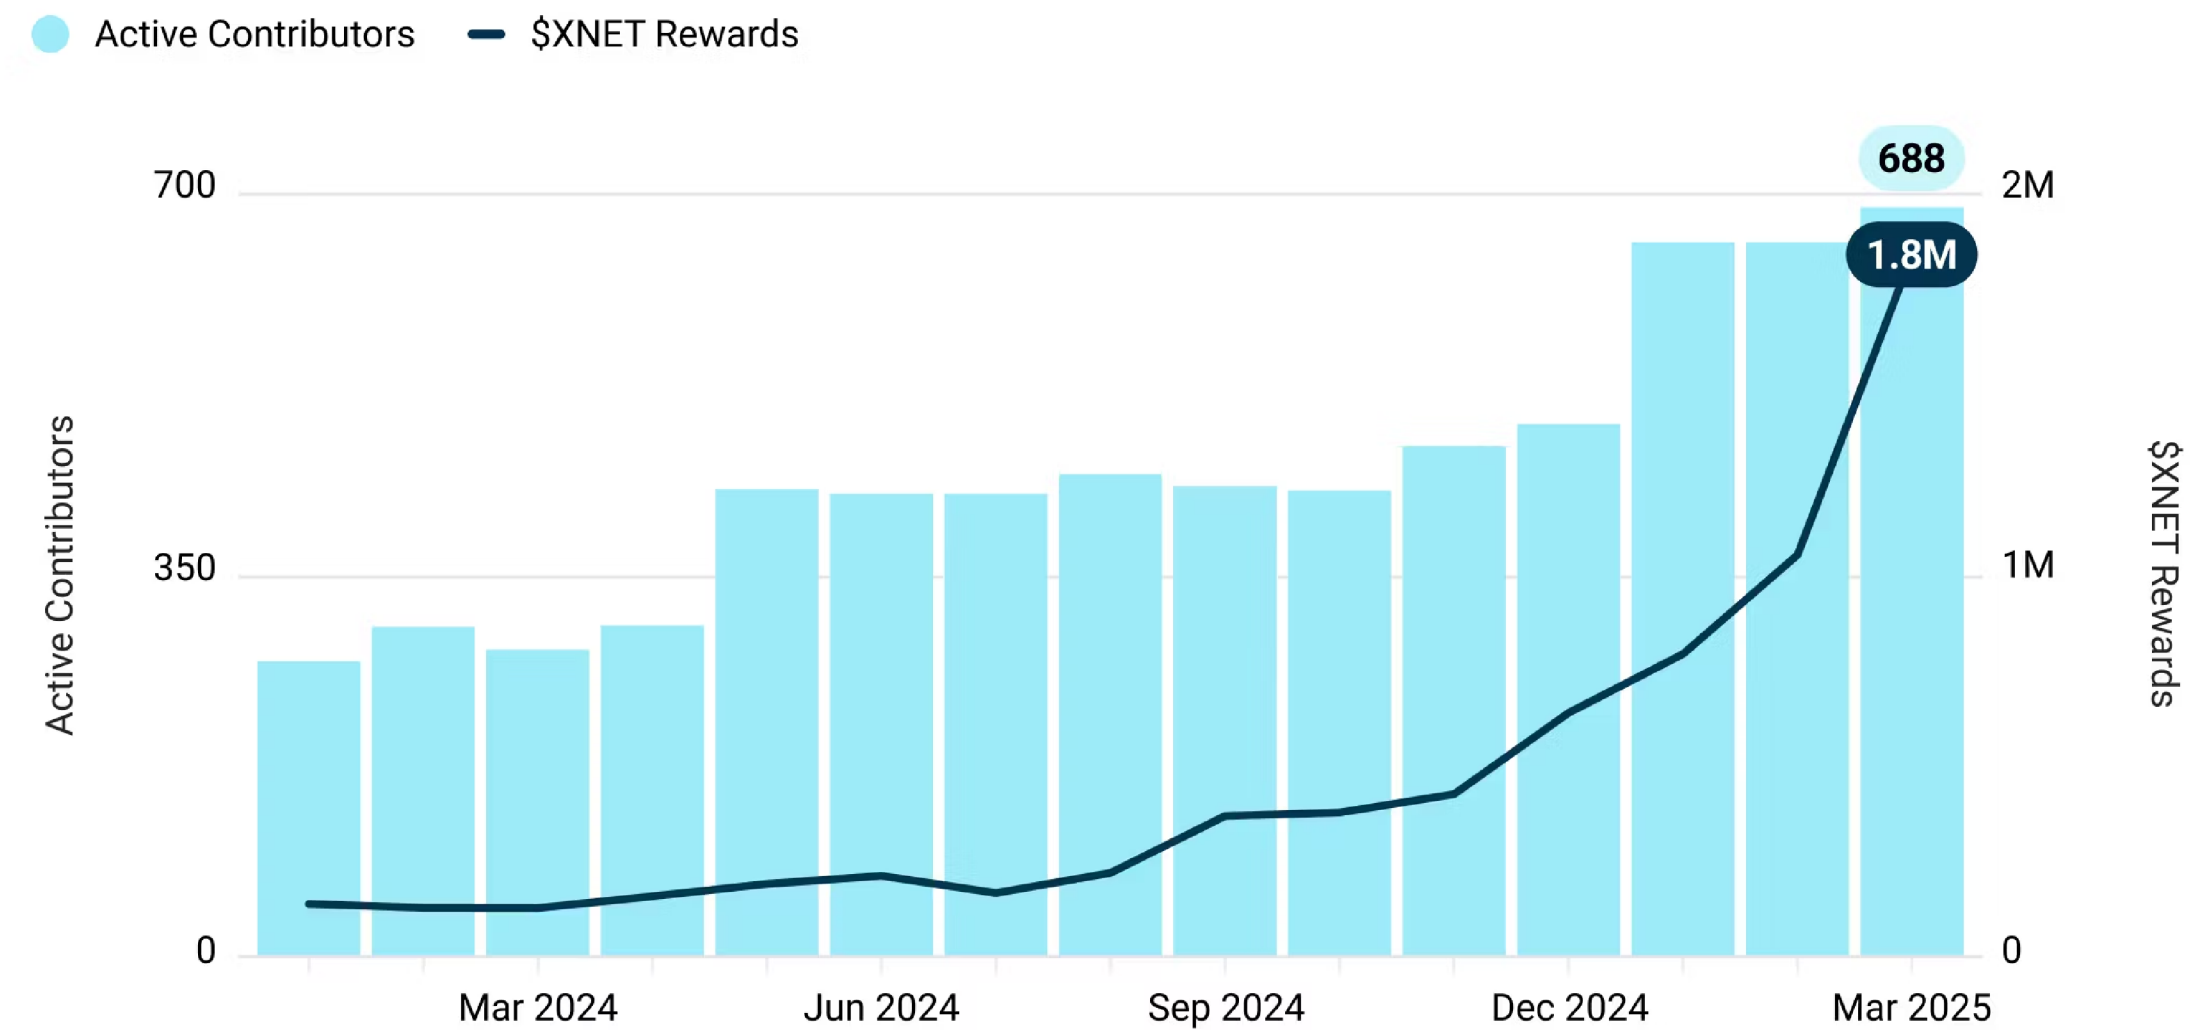

The XNET Foundation working group approved XIP-11 which sets a fixed 2.5M \$XNET token rewards per epoch. This ensures balance between network growth and sustainability.

Note: This data has been obtained from XNET's Dune dataset.

New Helium Mobile subscribers are on a fresh uptrend.

Total subscribers grew 11% to 160k. Starting in April, Helium is launching a free plan available to everyone, which is expected to boost subscriber growth.

Helium Mobile New Subscribers By Month

● Cumulative Old Subscribers ● New Subscribers

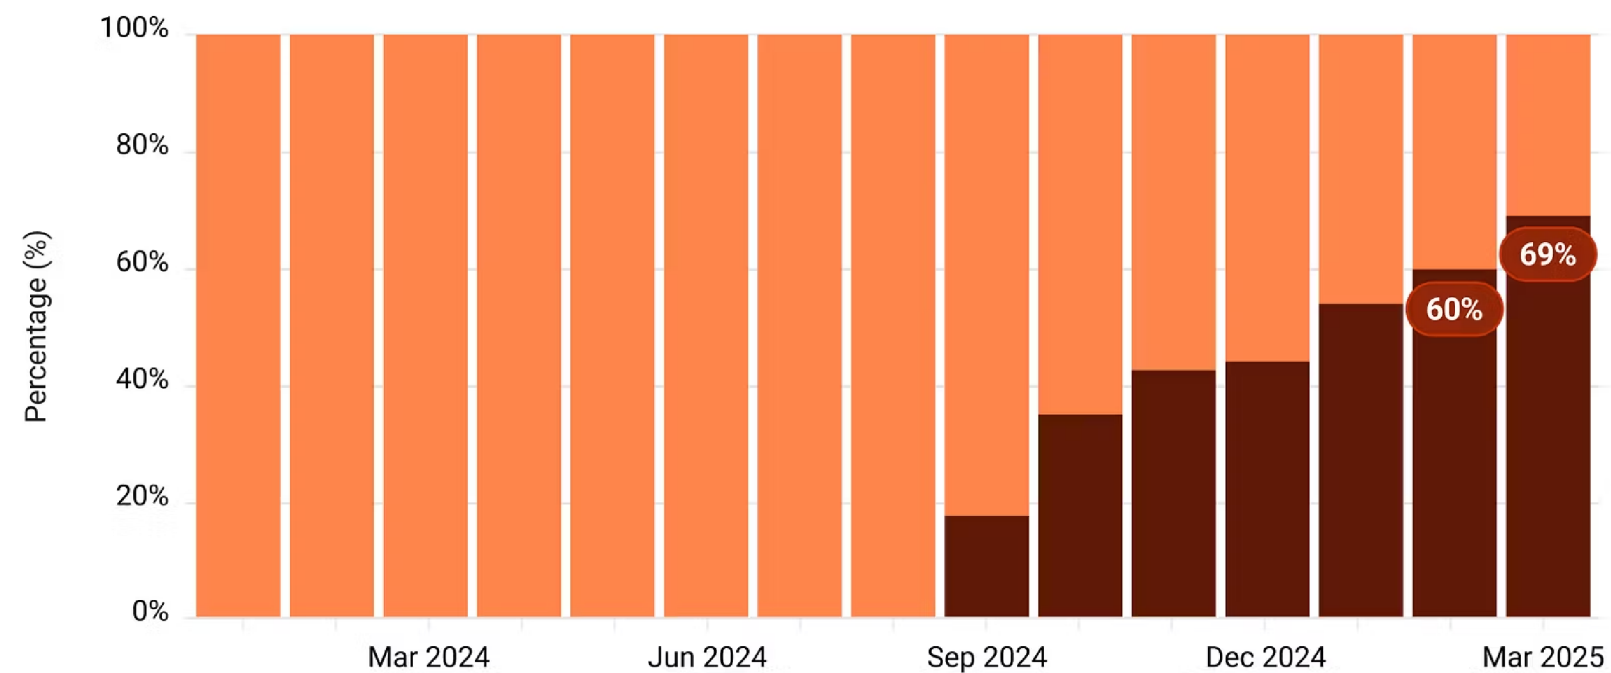

Data offloading has become Helium Mobile's key strength.

Data offloading now drives 69% of Helium network demand.
Total demand—measured by data credits burned—increased 12% in March.

\$NOS Rewards Active Operators

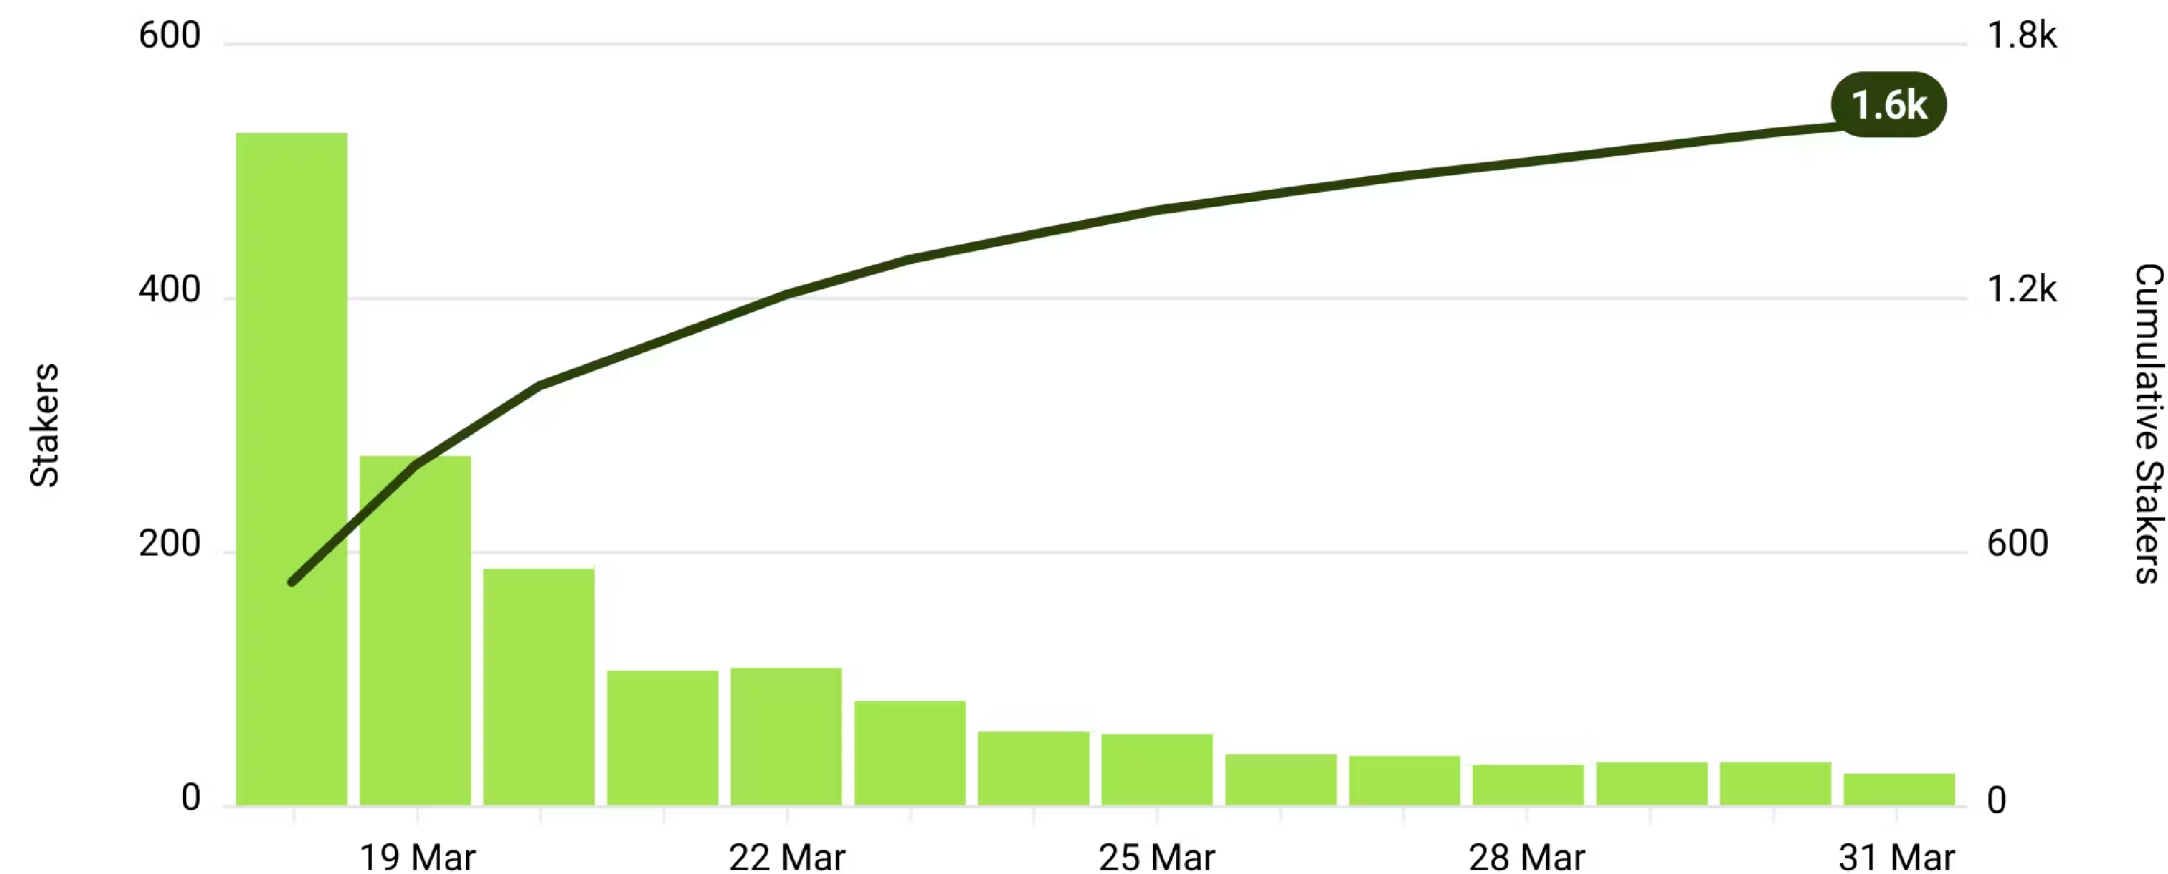

Hivello launched their long-anticipated token.

Hivello, a DePIN aggregator platform for monetizing idle resources, distributed \$HVLO tokens to active operators on March 18. Over 1,600 token holders staked their tokens in March, signaling strong early engagement.

Hivello Stakers

By Day

Stakers Cumulative Stakers

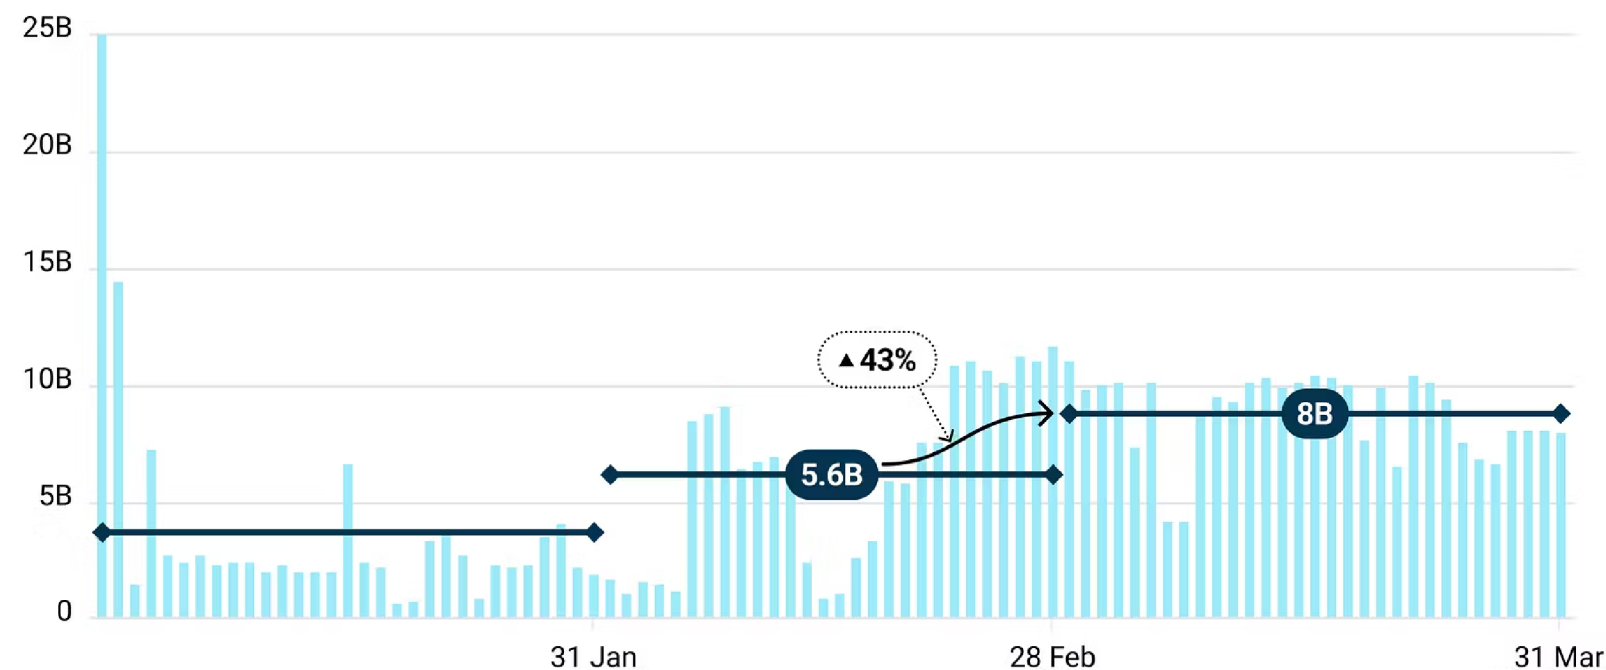

Points generation on Kuzco hit a new ATH.

Points earned by node operators jumped 43%. This was likely driven by a spike in network inference demand as their monthly active GPUs remained consistent.

Part III

Mapping

Hivemapper hit a new ATH in monthly kilometers mapped.

With more Bee Dashcams hitting the road, Hivemapper's mapped kilometers increased 22% in March.

Note: Data has been sourced from Hivemapper's explorer page.

// Deep Dive: Mapping // March 2025

Hivemapper KM Mapped By Month

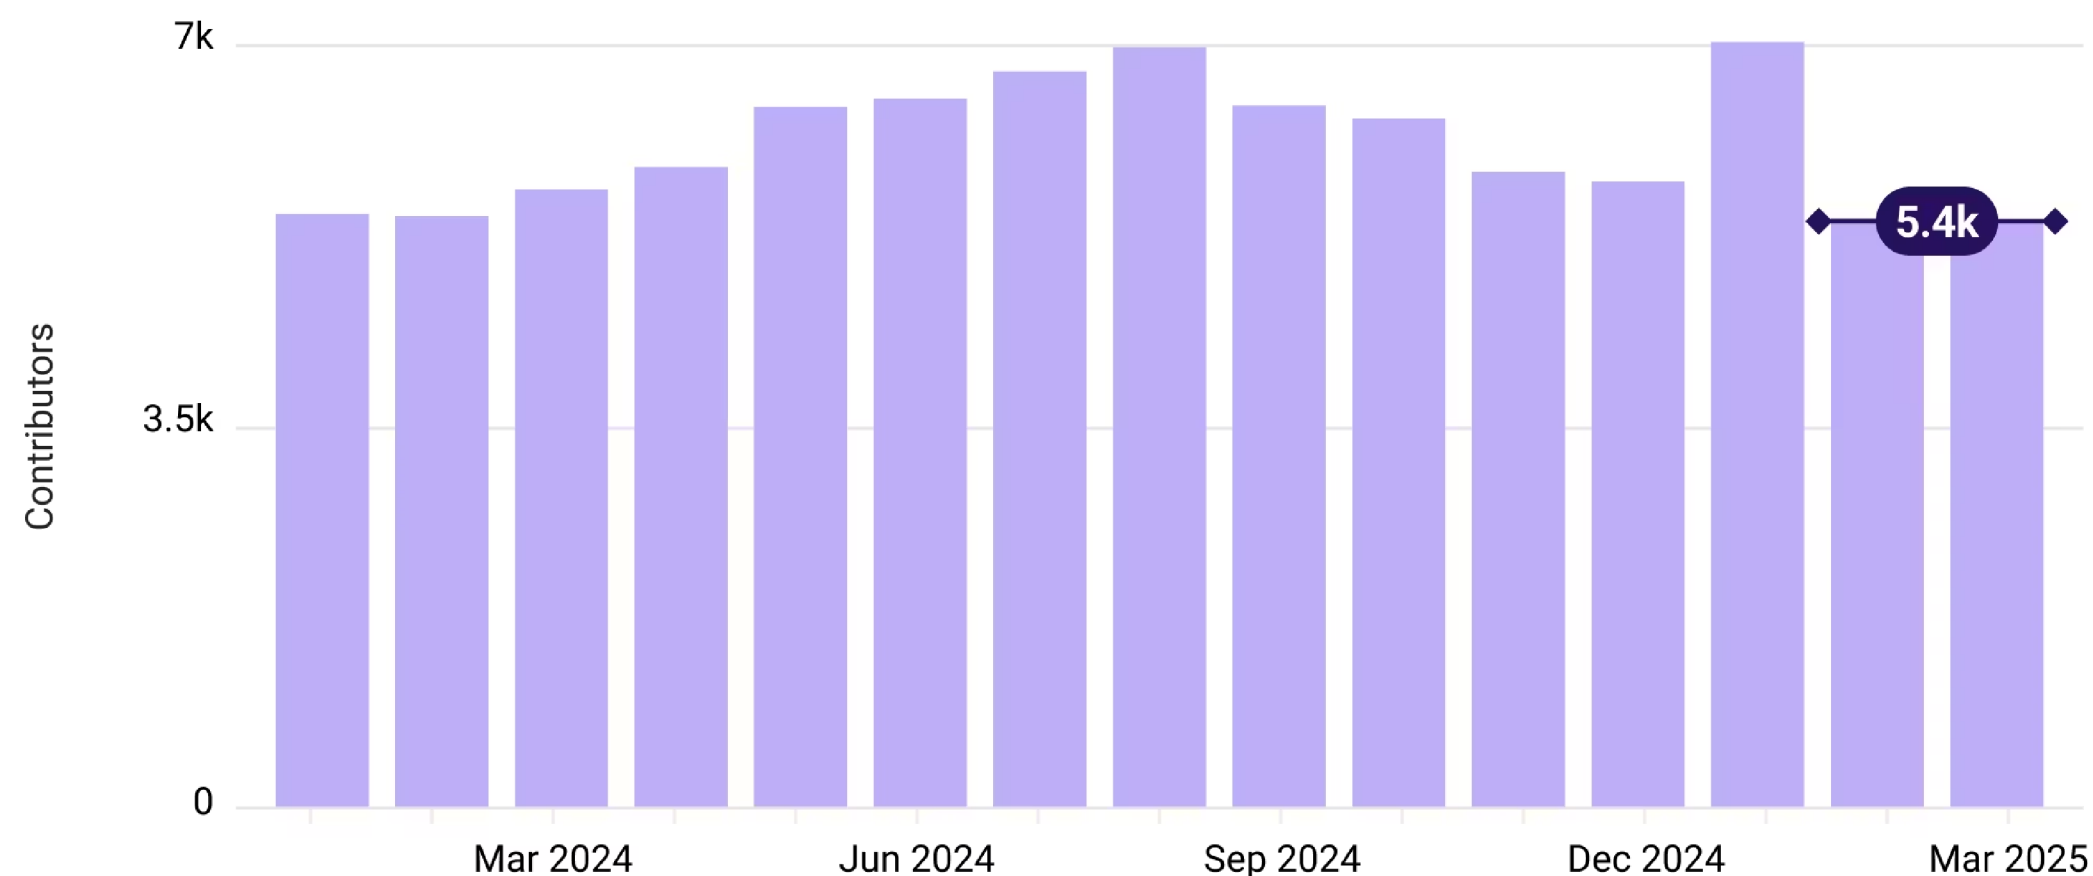

Note: Data has been sourced from Hivemapper's explorer page.

Hivemapper's active map contributors stabilized.

Throughout March, the number of active Hivemapper contributors remained consistent at around 5k. To further improve the mapping experience, Hivemapper launched a mobile app for the Bee Dashcam.

Hivemapper Active Map Contributors By Month

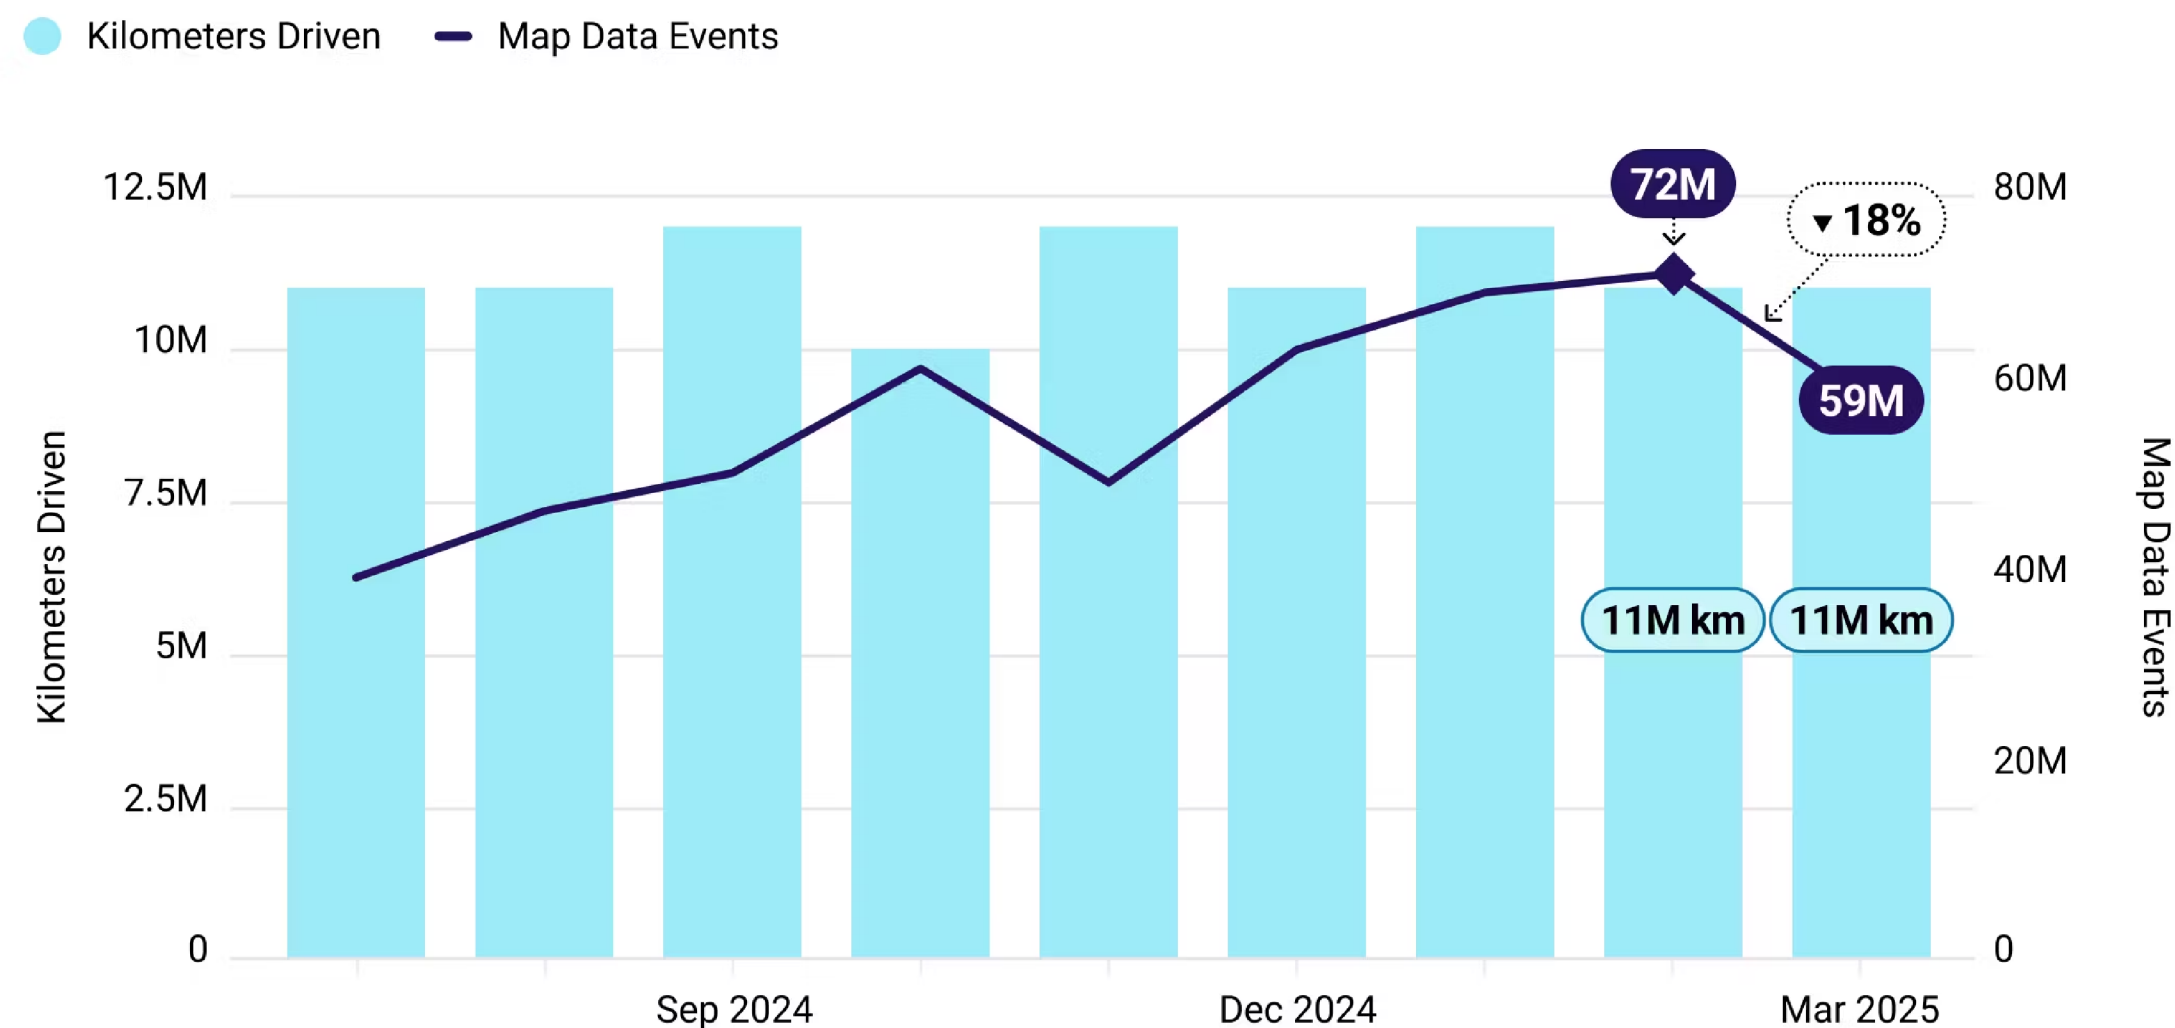

NATIX data collection remained consistent.

While users drove 11 million kilometers, map data events collected dropped by 18%.

Note: Data has been sourced from NATIX's blog.

// Deep Dive: Mapping // March 2025

NATIX Network Data Collected By Month

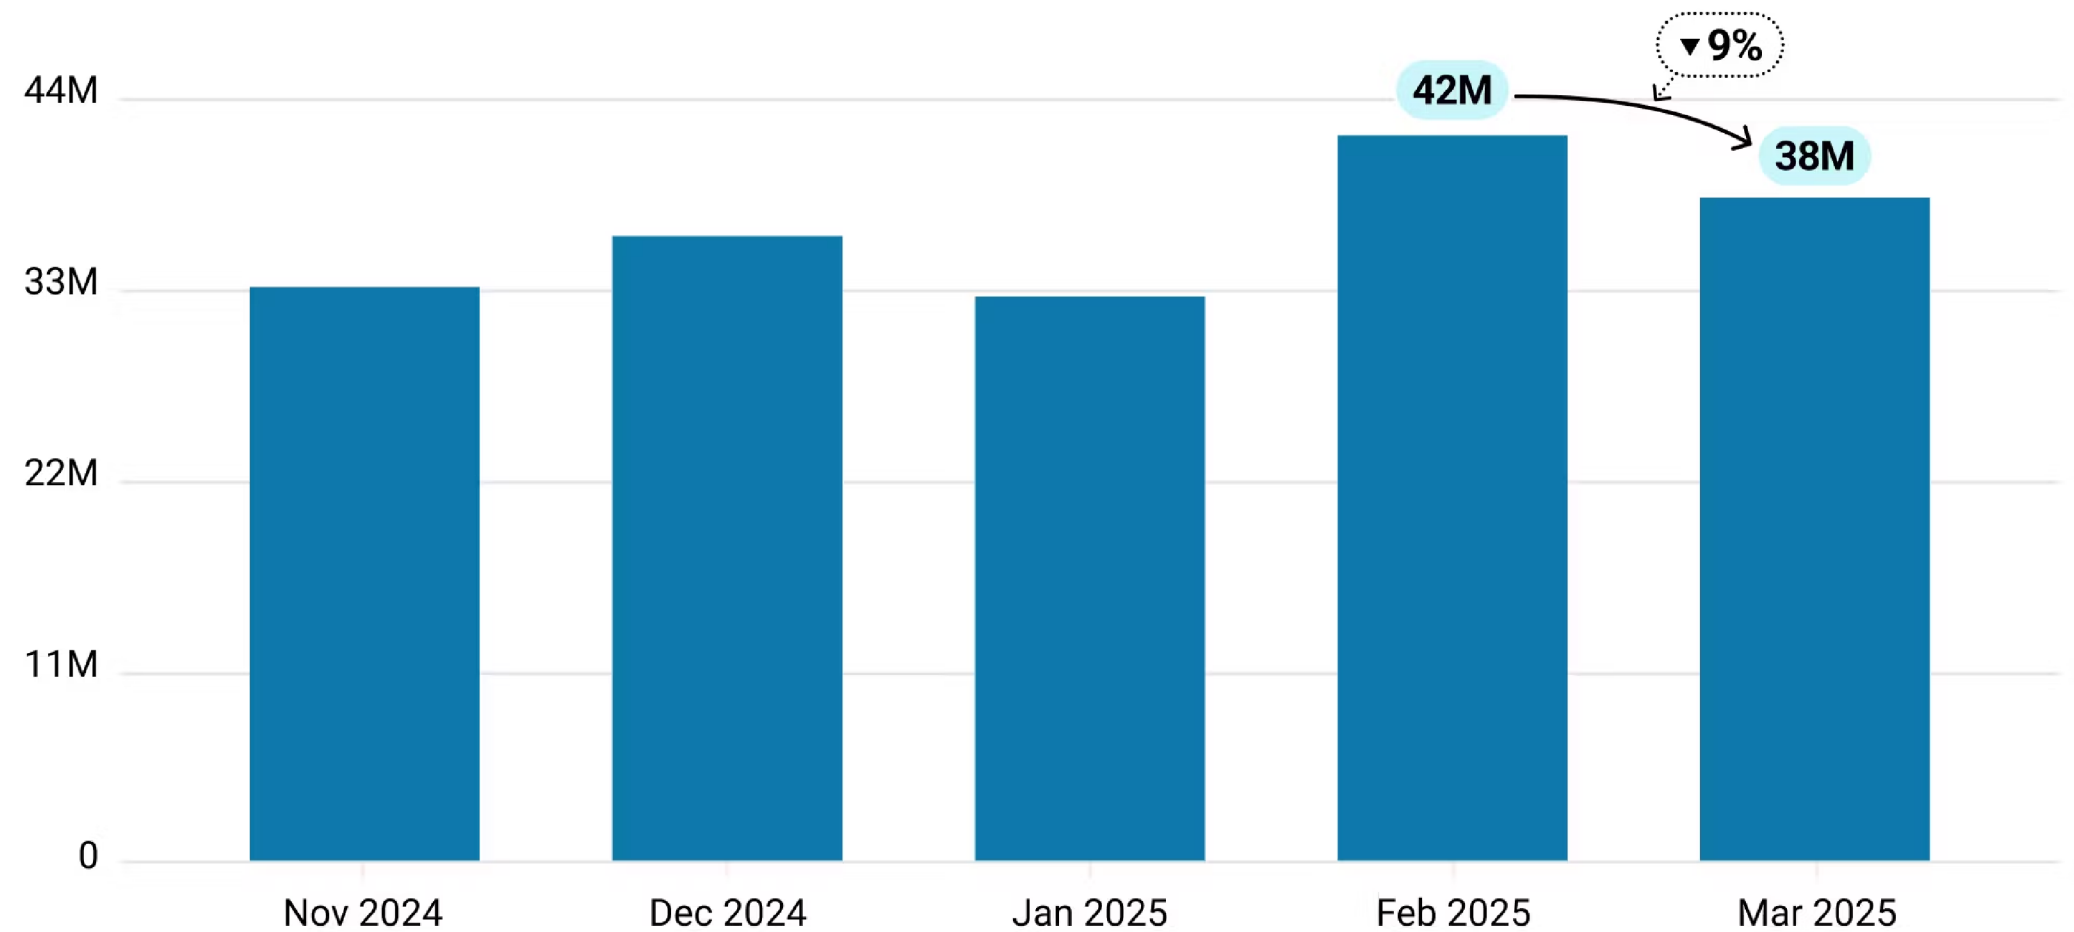

Note: Data has been sourced from NATIX's blog.

NATIX demand has stabilized in March.

NATIX's token burn cooled by 9% at just 38M tokens.

NATIX Token Burned By Month

Part IV Environment

Srcful power production sets a record high.

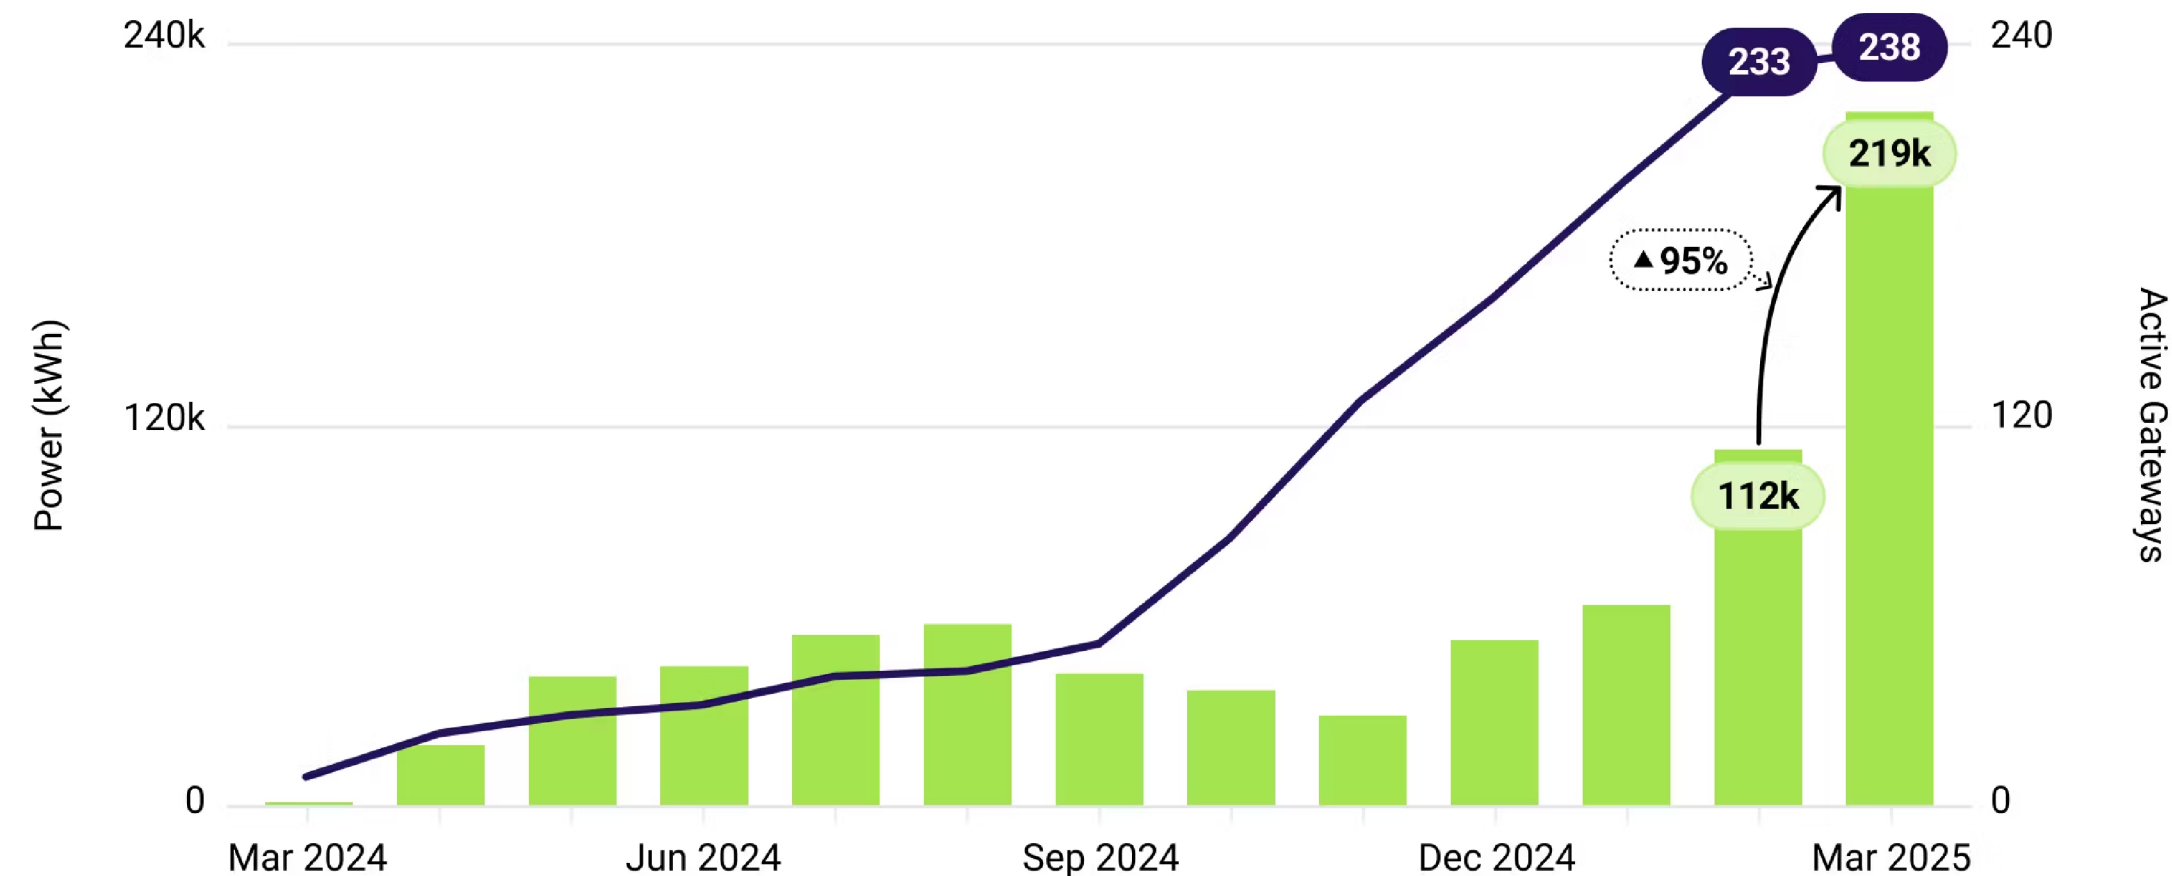

Power output nearly doubled in the latest period, even as the number of installed gateways held steady.

Note: This data has been obtained from the Srcful API.

Ambios' web app, AmbiGo!, has gained traction.

AmbiGo! is a community-driven platform for environmental monitoring.

Users earn points by checking in and sharing local ecological data to help Ambios optimize sensor placement.

The platform has rapidly expanded, with over 44k users and 1.8M check-ins.

Join the ambient quality movement and get rewarded!

Part V News

News

Wingbits

Wingbits x Spire's satellite was deployed into space through a SpaceX launch in March.

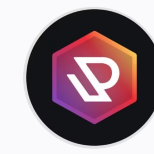

Roam

Roam started airdropping tokens to contributors, including OGs, NFT holders, and device owners in late February and early March.

Solana Summit

The latest Solana Summit featured DePIN and hardware in India. The summit held various presentations from both newer and veteran DePIN protocols.

UpRock

UpRock now has over 2.6M connected devices. The protocol has also been integrating more projects into Prism, an uptime monitoring system.
