

# Deep Dive: Solana DePIN

# Solana DePIN protocols generated \$17M revenue in 2025.

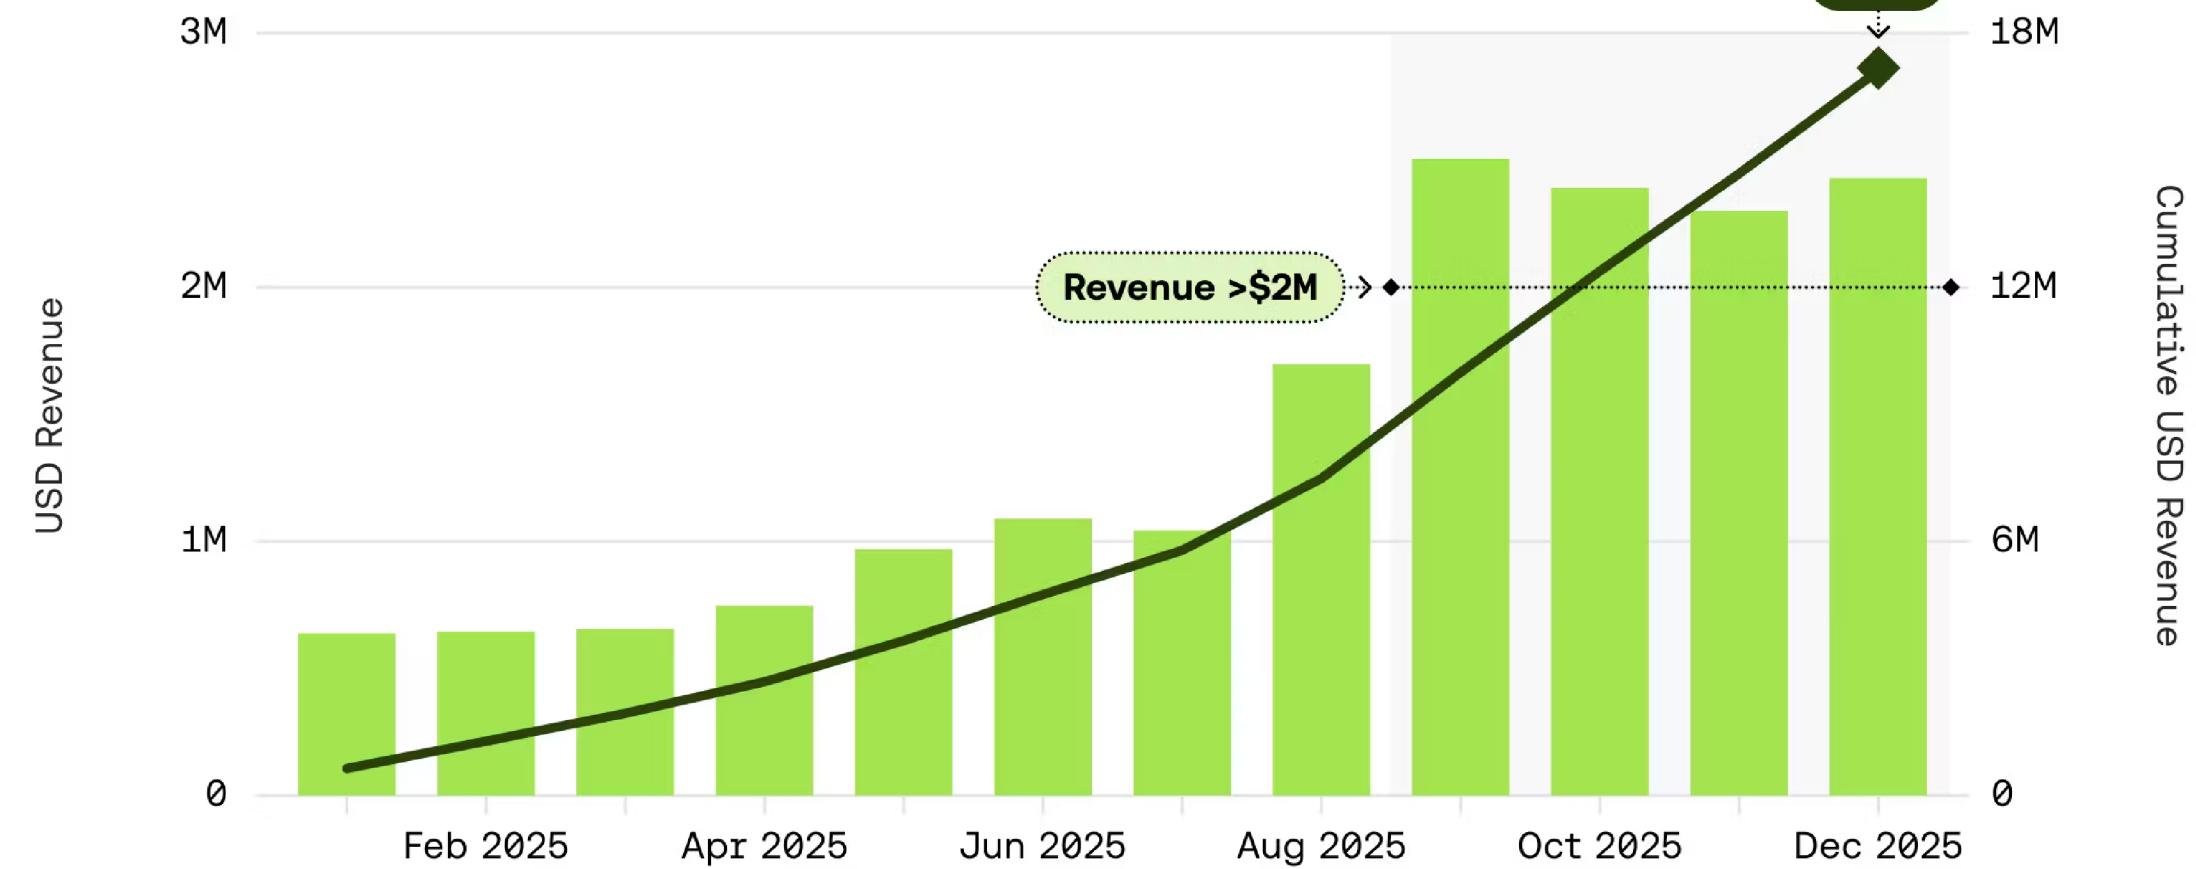

Helium, Render, Hivemapper, UpRock, NATIX, XNET, and Geodnet collectively sustained over \$2M in monthly revenue for the last four months of the year.

*Note: This metric is limited to protocols with verifiable onchain revenues. We track \$GEOD, \$RENDER, \$HONEY, \$UPT and \$NATIX burned for Geodnet, Render, Hivemapper, UpRock, NATIX and Data Credits burned for Helium to determine revenues.*

## Data offloading across wireless protocols nearly doubled.

In December, Dabba Network, Helium Mobile, and XNET collectively delivered 27k TB of offloaded data, a 1.9x jump from November. For the full year 2025, the three protocols served 72k TB in total offload volume.

# Helium Mobile subscribers grew exponentially in 2025.

In 2025, Helium Mobile averaged 41k new subscribers per month, a 4.9x increase from 2024. December added another 42k, pushing cumulative subscribers past 600k, fueled by ongoing incentives like Cyber Monday sales and free international roaming plans.

# Hivemapper monthly revenue stabilized in late 2025.

In the final months of 2025, Hivemapper consistently delivered at least \$110k per month for two consecutive months, pushing the full-year revenue to \$550k. Average monthly revenue declined 18% compared to 2024.

# Hivemapper built a strong driver ecosystem in 2025.

Throughout 2025, Hivemapper added 10k new drivers and saw its network map a cumulative 284M kilometers.

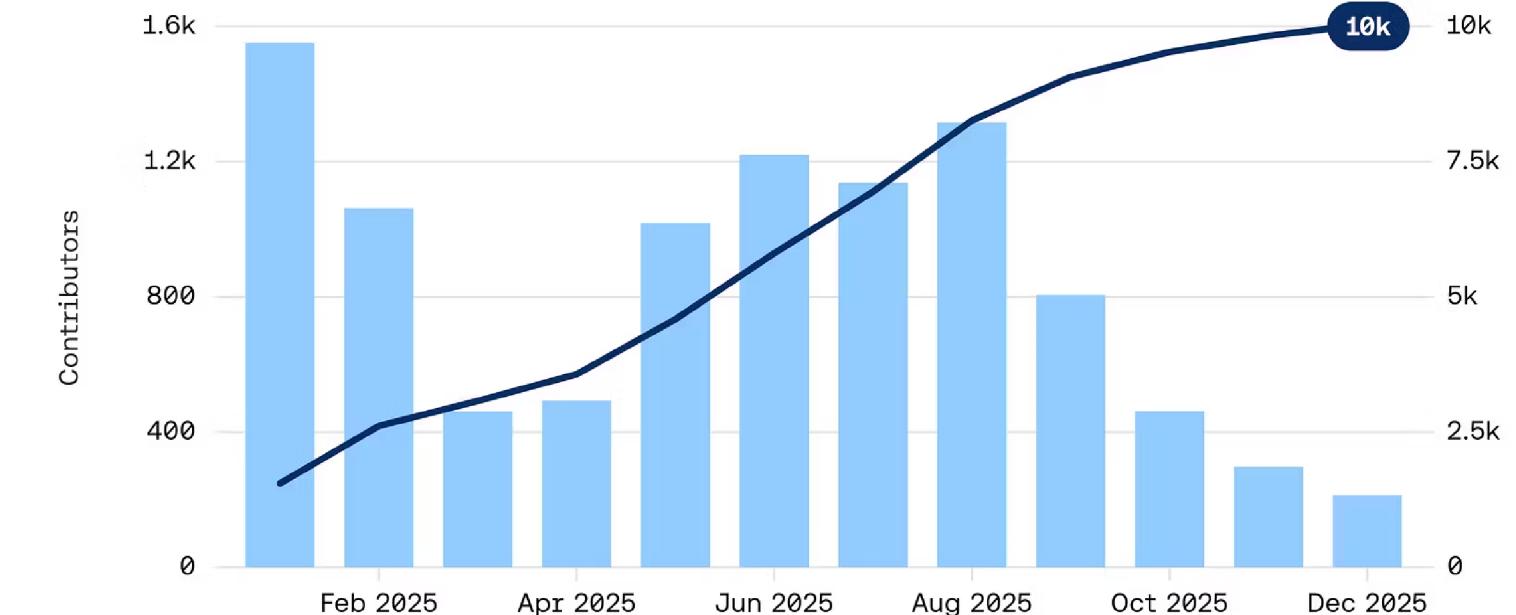

Note: Data has been sourced from Hivemapper's explorer page.

# Part III

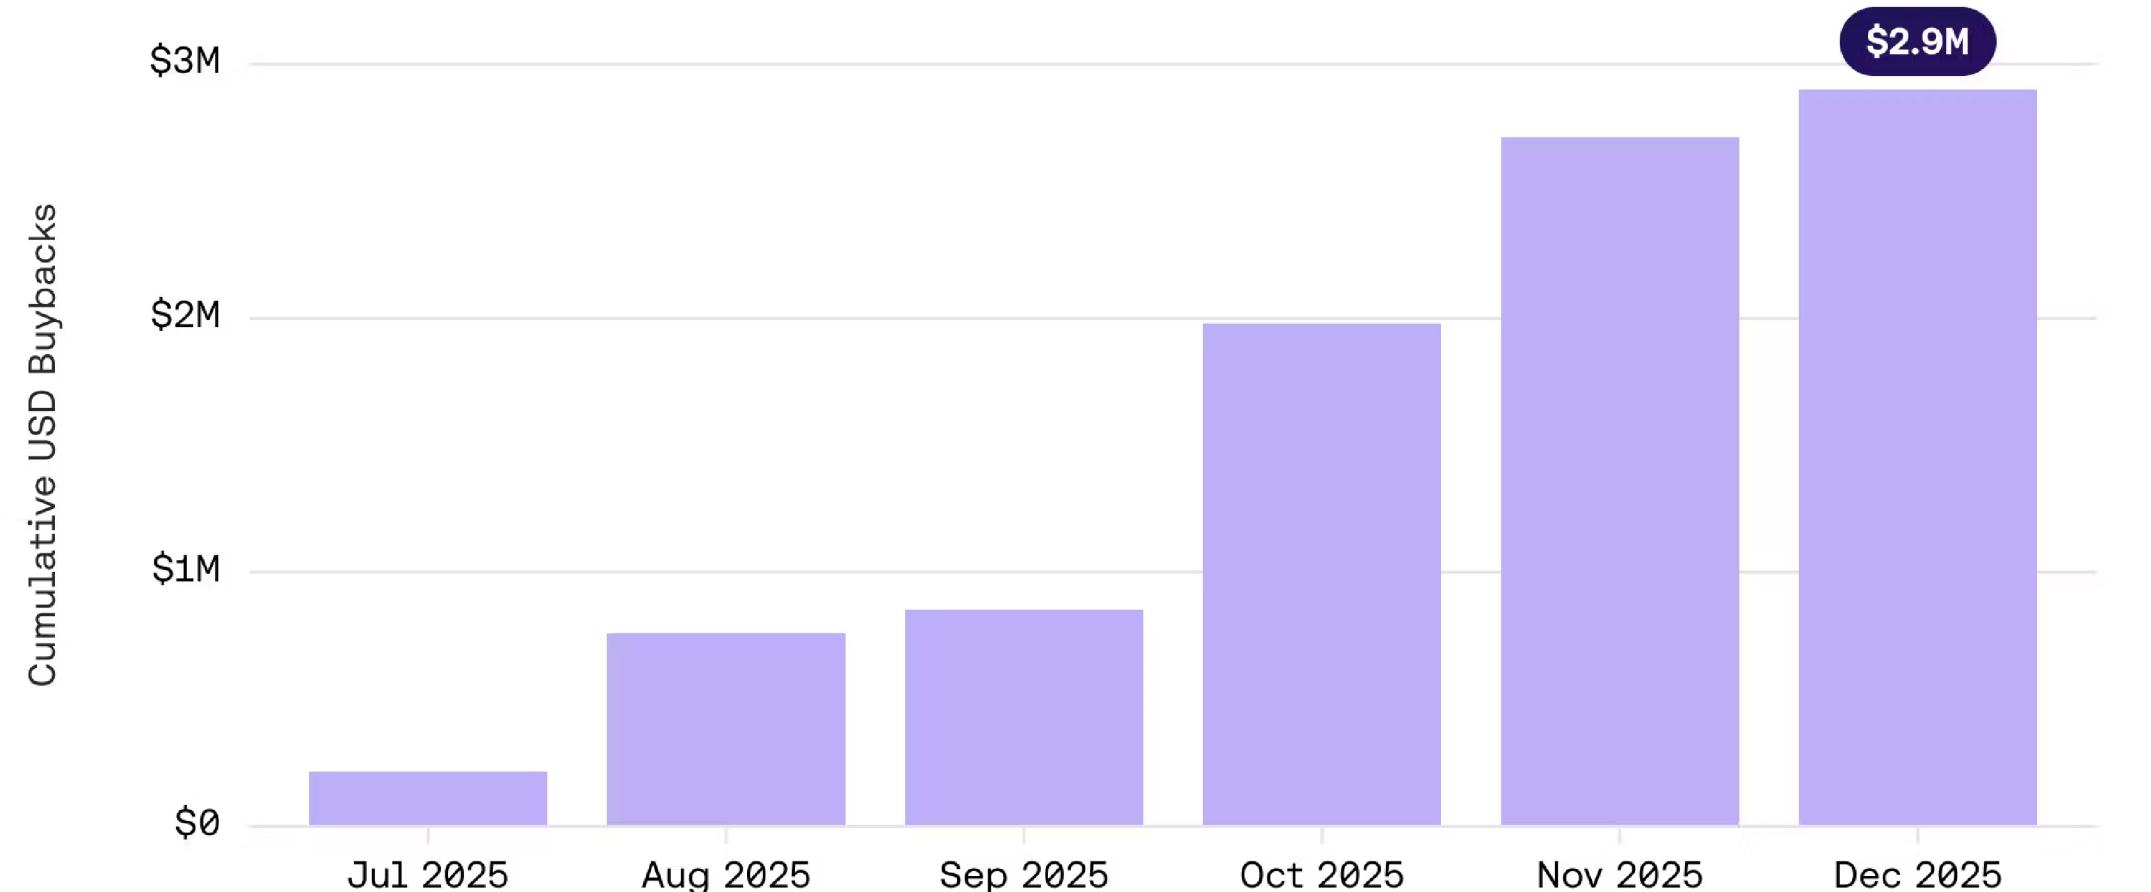

# Compute, AI, & Data

# io.net bought back \$2.9M worth of \$IO in 2H25.

The protocol has programmatically repurchased \$2.9M worth of \$IO tokens since the second half of 2025, using a portion of revenue tied to a dynamic burn formula. io.net is now shifting towards a utility-driven token model that directly anchors \$IO value to actual GPU demand and real payouts.

# Nosana completed 2M jobs in 2025.

Monthly jobs stabilized around 200k in the second half of 2025, pushing the year's total past 2M.

Average monthly jobs doubled compared to 2024, reaching 170k on average.

# Render demand grew in 2025.

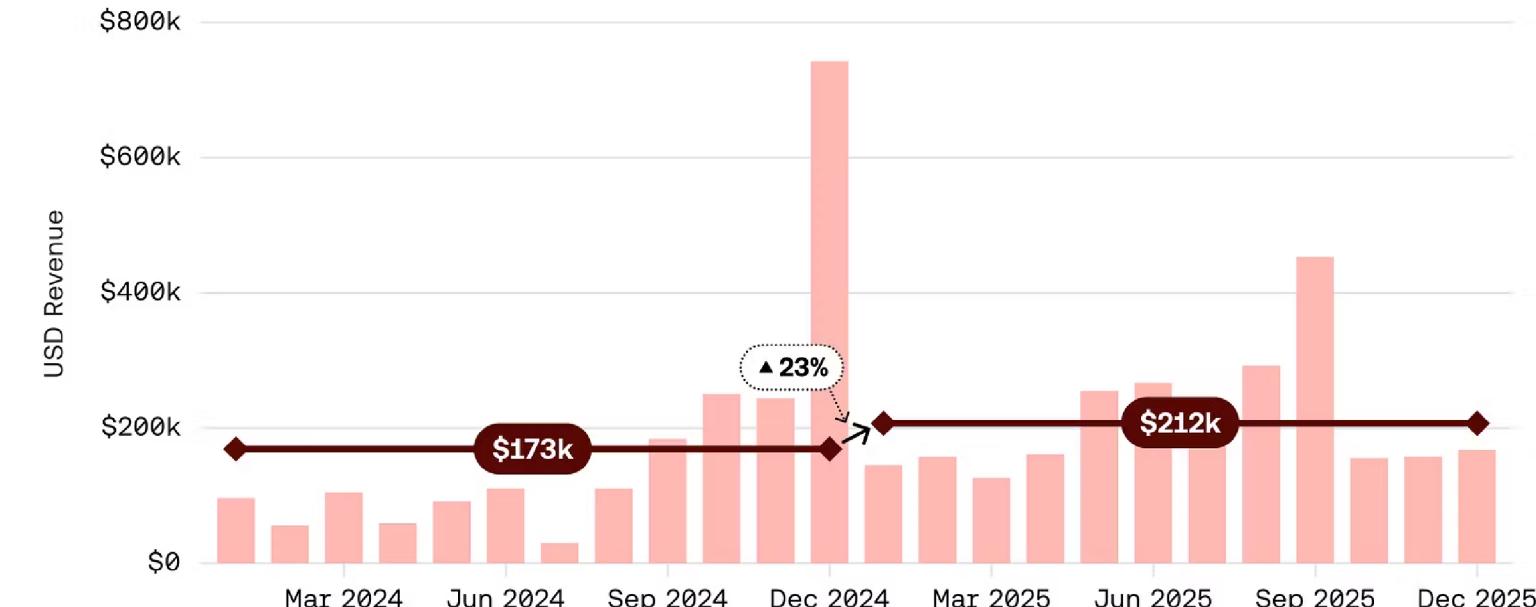

In 2025, average monthly revenue rose 23% to \$212k, with the protocol earning \$2.5M for the year. December saw a 7% increase from November.

Render launched Dispersed, a decentralized compute platform for on-demand high-performance computing which could further grow demand.

# Part IV

# Pipe

# Network

# Pipe Network provides a unified stack.

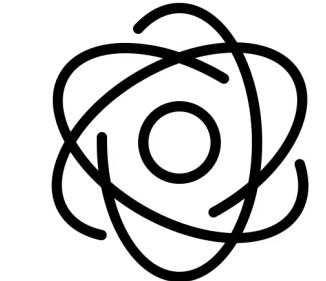

## Pipe Content Delivery Network (CDN)

Delivers content from nearby nodes.

## Firestarter Storage

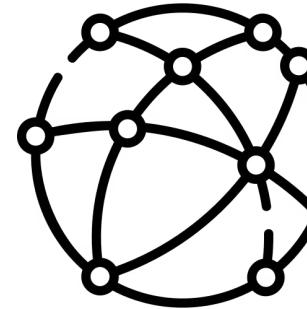

Decentralized storage that sits behind the same network.

## P1 Overlay Network

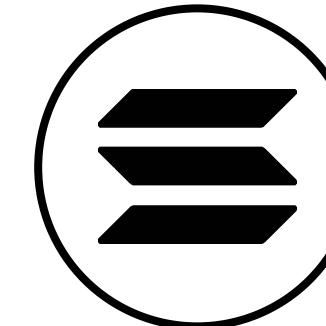

Routing layer that finds and uses the fastest paths.

# Pipe Network improved on content delivery networks.

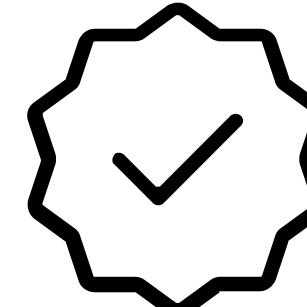

## Nodes Closer to End Users

Mesh of hyperlocal PoP nodes that anyone can run, reducing latency and removing single points of failure.

## Transparent Onchain Rewards

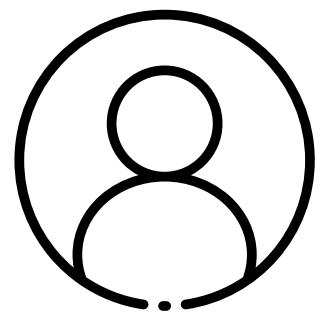

Solana records usage immutably and distributes rewards fairly on-chain.

## Verified, Private Delivery

zkTCP / zkQUIC use zero-knowledge proofs to confirm packets were relayed correctly without revealing their contents.

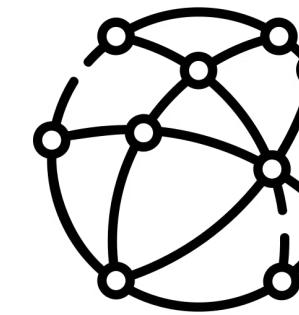

# Anyone can turn unused bandwidth to a Pipe node and earn rewards.

## Network User

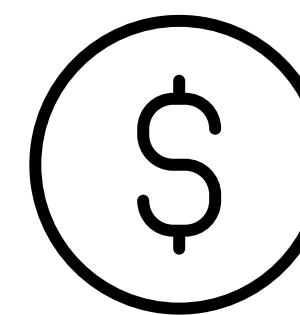

Network user pays for usage.

Uses bandwidth

## Unused Bandwidth

Anyone that meets the system and storage requirements can run a Pipe Node.

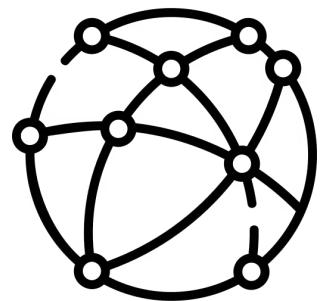

## Rewards

Node operators receive \$PIPE tokens as rewards for delivering verified traffic.

Earn \$PIPE

# Pipe Network has seen healthy traction since its mainnet launch in October 2025.

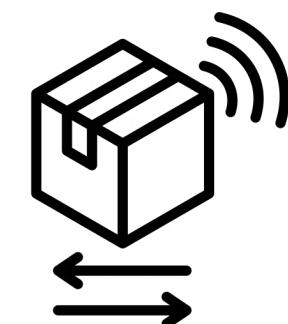

## Network of Nodes

33k nodes on mainnet.  
280k+ nodes on testnet and devnet.

## Worldwide Coverage

6 continents with great coverage in Europe.

## Reliable Content Delivery

10.1M verified work done by nodes in mainnet and 60+ PB of data served in testnet.
